PROFESSIONAL SUMMARY

Java Backend Developer with 2+ years building production banking systems for HDFC Bank and Qatar National Bank. specialized in Spring Boot microservices, Apache Kafka event-driven architecture, Oracle SQL performance tuning, and Spring Security — delivering 30% throughput improvement and 30% query load reduction in high-volume environments. Strong full-stack exposure via Angular 15 and a self-built E-Commerce microservices platform. Open to backend and full-stack Java roles in fintech, enterprise, or product companies.

TECHNICAL SKILLS

Core Java	Java 8 / 17 / 21, Collections, Multithreading, Streams API, Lambda, Generics, Exception Handling, JDBC
Backend	Spring Boot 3.x, Spring Security, Spring Cloud (Gateway, Feign Client, Config), Hibernate, JPA, Resilience4j
Messaging	Apache Kafka — Producers, Consumers, Partitions, Consumer Groups
APIs & Auth	REST, SOAP, JWT, OAuth2, WS-Security, Swagger / OpenAPI
Database	Oracle SQL, MySQL, MongoDB — query optimization, indexing, execution plan analysis
Frontend	Angular 15+ — Components, Services, Reactive Forms, RxJS, HTTP Client
DevOps & Tools	Docker, AWS EC2, S3, Application Deployment, Linux Server Management, Git, Maven, CI/CD, SonarQube, SonarLint
Practices	Microservices Architecture, Design Patterns, DSA, Code Quality Gates

PROFESSIONAL EXPERIENCE

Software Developer Image InfoSystems Pvt. Ltd.	Apr 2024 – Present Latur, MH
Banking & Fintech — HDFC Bank (Cheque Truncation System) & Qatar National Bank (Interbank Transaction System)	
- Engineered Spring Boot microservices for high-volume banking workflows, contributing to 30% transaction throughput improvement and 20% overall system performance gain. - Secured REST and SOAP services using Spring Security + JWT/OAuth2; configured Spring Cloud API Gateway for routing, load balancing, and filtering across 5+ microservices. - Optimized Oracle SQL queries through execution plan analysis and indexing strategies, reducing average query load time by 30% on HDFC's Cheque Truncation System. - Reduced critical bugs and code smells by 40% by enforcing SonarQube quality gates across both banking projects. - Leveraged Multithreading and Streams API to implement parallel processing workflows in QNB's Interbank Transaction System, handling 10,000+ daily cross-border transactions at 99.9% uptime. - Collaborated with an Angular 15 frontend team on API contract design and HTTP integration, cutting UI-to-API defects by 30%. - Executed centralized exception handling and structured logging, enabling proactive incident monitoring and faster resolution. - Configured and maintained AWS EC2 Linux instances for banking applications, deployed Spring Boot WAR/JAR releases, monitored application logs, performed production troubleshooting, and supported deployment activities across HDFC and QNB environments.	

KEY PROJECTS

HDFC Bank – Cheque Truncation System	Jun 2024 – Jan 2025
Stack: Java 17, Spring Boot, Hibernate, Oracle SQL, REST, SOAP	
Built cheque validation and processing modules using Java Streams and Collections; integrated 3 core banking systems via REST/SOAP APIs, reducing processing time by 20%.	

- Applied Spring Security for API authentication and implemented WS-Security headers for SOAP compliance across internal banking services.

Qatar National Bank – Interbank Transaction System

Jan 2025 – Present

Stack: Java 17, Spring Boot, Spring Security, Oracle SQL, SOAP WS-Security

- Developed and enhanced REST/SOAP services processing 10,000+ daily cross-border transactions with 99.9% uptime SLA; ensured full SOAP WS-Security compliance for regulatory audits.
- Optimized critical Oracle SQL queries and stored procedures, contributing to the project-wide 30% query load reduction.

E-Commerce Platform – Microservices

2026 | Personal Project

Stack: Java 17, Spring Boot, Spring Cloud, Feign Client, Kafka, Resilience4j, JWT, Docker, MySQL, MongoDB, Angular 15

- Designed a 4-service distributed architecture (Product, Inventory, Order, API Gateway) with JWT security and Feign Client for synchronous inter-service communication.
- Applied Kafka for asynchronous order workflows and Resilience4j Circuit Breaker with fallback mechanisms for downstream fault tolerance.
- Applied polyglot persistence: MongoDB for product catalog and MySQL for transactional data; containerized all services with Docker.
- Built an Angular 15 frontend with Reactive Forms and RxJS HTTP integration for product browsing and order placement.

EDUCATION & CERTIFICATIONS

B.E. Information Technology — Savitribai Phule Pune University

2019 – 2023 | CGPA: 8.32 / 10

Java Full Stack Development — The Kiran Academy

Dec 2023 – Mar 2024
